

ESCAN

The Control Area Network for Media Control and Management

ESCAN is a control system for the network age. This unique control area network allows local and remote control of all audiovisual assets via local network or the Internet. It is a full feature controlling and monitoring system that will keep you informed of the status of your AV system around the world.

Today's audiovisual and media presentation systems are moving away from 'canned' presentations that run for many months or even years to something more akin to a multi channel broadcast system. In many of these applications, on-site technical services are not available or affordable. Using the established network technology and infrastructure available today, MediaSonic is able to help manage these maintenance issues.

ESCAN moves the control and programming of media system out of the hands of the few 'black-belt' experts and into the hands of the owners and operators of the facility. ESCAN's uncluttered interface provides simple access to the creative possibilities of the system.

APPLICATIONS

- Retail Stores
- Museums
- Arenas
- Theme Attractions
- Control Rooms
- Corporate
- Entertainment
- D Cinema

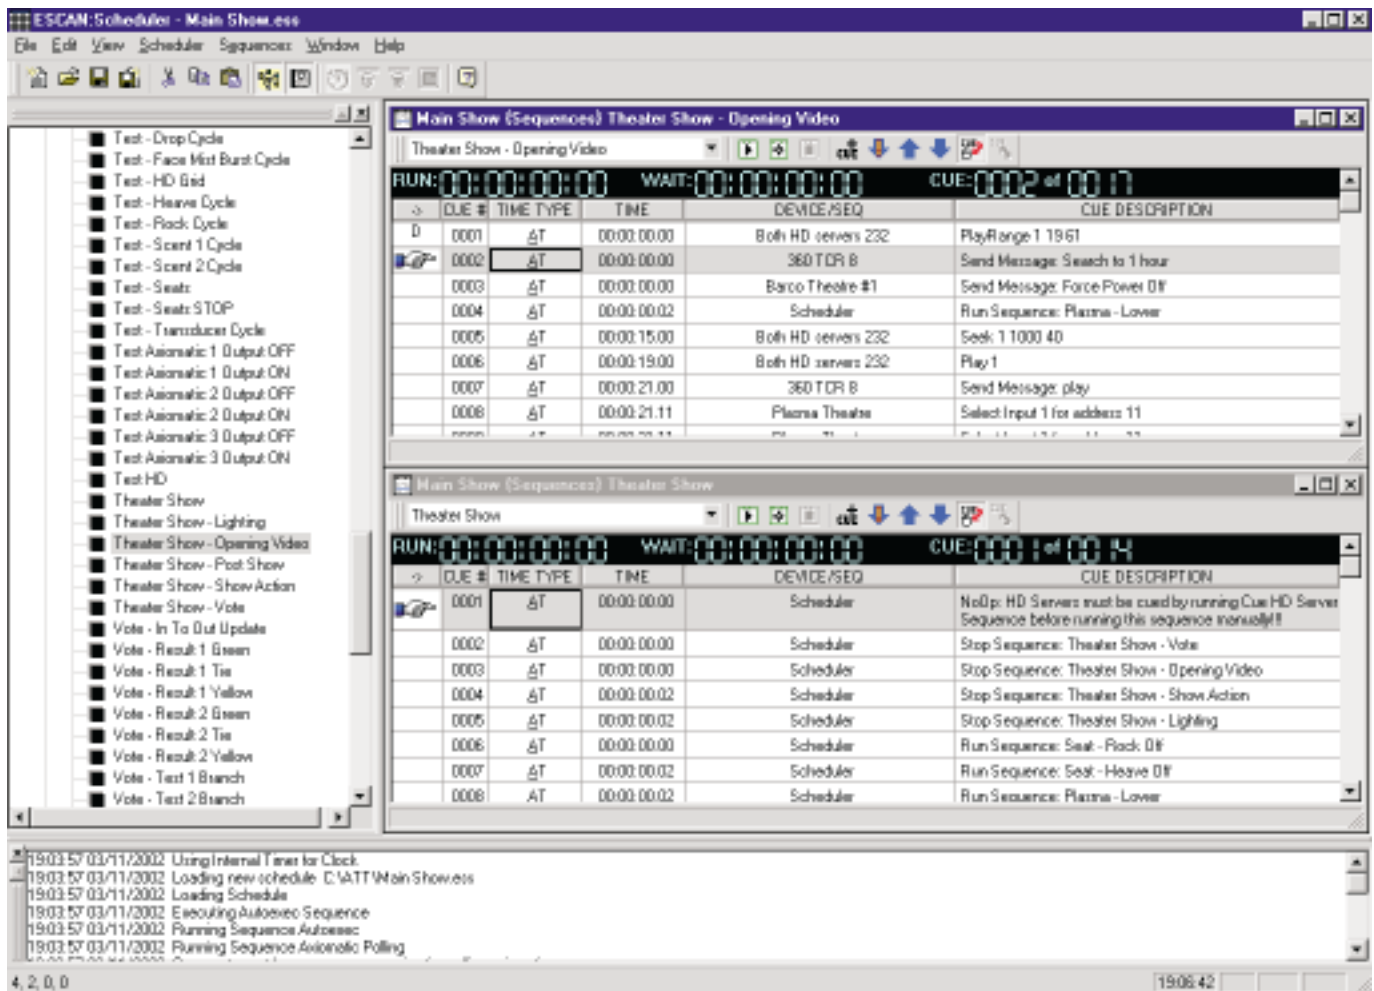

MediaSonic is the media networking division of Electrosonic Systems - a worldwide leader in video systems integration - the MediaSonic team has provided pioneering digital video products and systems to video professionals for 15 years

FEATURES

- Create time of day schedules
- Store and edit multiple schedules
- Run multiple schedules simultaneously
- Run sequences locked to an external SMPTE Timecode
- Email Notification of Events and Faults
- User definable user interface control using ESCAN Overlays
 - Visual Basic, HTML, PowerPoint
- Built from the ground up for LAN and WAN application
- Can control any device that has a remote interface
- Control of unlimited Devices
- Hundreds of pre built device protocol modules
